

Welcome to Avatao!

Hi there!

Looks like you've found your way to the Avatao secure coding training platform! And that means your company is already paying attention to security, which is a great start. Security is an essential part of the development process, and we're committed to helping you improve your secure coding skills with our hands-on training process.

What's next?

You'll soon receive an email invite with instructions on how to register and how to use SSO (single sign-on). Once you've gotten the email and registered, just hang tight until an admin assigns you to a team and/or module.

What the next year will look like

The training will run for 12 months, and over that time you can expect to improve your secure coding abilities, learn new skills, and find out how to make your product safer, better, and more effective. The trainings are highly recommended for any software engineer who wants to ship quality code. Security is a must have feature to get there. We've developed this platform to make sure developers can keep up with the ever-changing security trends and best practices - after all, developers who understand the security risks out there will be able to develop safer, better, and more effective products. Feel free to browse through our courses and assign yourself the modules that fit your needs!

What should I do now?

For the moment, you're all set. Like we mentioned, you'll need to wait for your admin's invitation to arrive. Until then, get yourself ready for the challenges ahead! The next 12 months will be fun, engaging, and most importantly, your secure coding skills will skyrocket!
